

The *BOSS*

By Novus Technologies Inc.

The first Upgradable, Expandable MDU Enclosure. Finally a MDU Enclosure that meets your needs today and allows you to plan for the future.

Steps to follow to install the BOSS.

Step 1: Place the template on the wall at the desired position. While observing the built-in level, position the template in a level plane. Strike each of the four corner MARKER PINS with a hammer, thereby identifying the location of each hole to be drilled.

Step 2: Drill all four holes straight in to the mounting surface using the marks left by the marker pins.

Step 3: Mount the enclosure to the wall using the recommended mounting hardware. If the mounting surface is not flat, locate the corners of the enclosure which are not flush to the wall. Adjust the shim bolts located in each corner of the enclosure. After adjusting the shim bolts, tighten the enclosure to the wall.

Step 4: Complete the wiring and install any optional equipment such as D-MARK plates, Tap Brackets, etc.

Step 5: Slam the self locking doors shut to secure the enclosure.

The **BOSS**

Upgrade your existing BOSS when you need that additional space.

Can Your MDU Enclosure do this?

Standard BOSS mounted on Apartment Complex

Same BOSS expanded with 12" expansion kit to house Telephone equipment.

The BOSS is the MDU enclosure for today and the future.

Technology is changing so rapidly, what you put in the field today may be obsolete tomorrow. Now you don't have to worry about technology shorting the life of your MDU enclosure. The BOSS expansion kit will assure you the space you need for the future without having to plan and pay for that space today.

Standard Features:

- All Aluminum Construction – Will not rust
- Two separate lockable compartments – Can be keyed alike or different
- Simple Upgrade procedures – Saves time and money
- 12", 18" & 24" kits standard – Custom sizes available upon request
- Same great features as The BOSS
